

In this historical time when Turkey enjoys a conjunctural advantage to become an Energy Hub, it needs to manage its national goals and global balances in harmony. One of the purposes of this presentation is to take a quick glance over active energy projects in the world, analyzing where Turkey stands within these projects, and point out what Turkey needs to do diplomatically and legislatively in order to reach its national goals regarding energy supply security.

TANAP, TAP and Turk Akım all need to play a role for Turkey to become an energy hub. I believe Turkey will have the chance to become an Energy Hub if it plays an active role in the development of the projects and afterwards, the continuation of these projects through the Balkans. Therefore, it needs to prepare for the Paris Convention more efficiently.
