

Cédric Clastres is Professor of Economics at Université Grenoble Alpes, Faculty of Economics.

He holds a doctorate in economics from the University of Montpellier. His research focuses on the liberalization of network industries and the regulation of natural monopolies. His main field of application is energy issues with research currently focused on the decentralization of energy markets.

In this applied context, he also studies changes in electricity consumption behavior following the implementation of incentives, pricing and information tools, and the regulation of energy networks.
